PYTHON LATE NIGHT ASSIGNMENT

1. **Make a script to send "Hi" 5 times to a friend.**

```
import webbrowser as web
import pyautogui as pg
import time

count = 0
number=int(input("Enter the number with country code as prefix: "))
while count<5:
    web.open('https://web.whatsapp.com/send?phone='+str(number)+'&text=Hi')
    time.sleep(30)
    pg.press('enter')
    time.sleep(3)
    pg.hotkey('ctrl','w')
    count += 1
```

2. **Make a script to send same message to 6 persons**

```
import webbrowser as web

import pyautogui as pg

import time

numbers = []

count=0

while count<6:

        num=input("Enter "+str(count)+" numbers to send message to: ")

        numbers.append(num)

        count+=1
```

```python
count=1
url1 = 'https://web.whatsapp.com/send?phone='
url2 = ',&text=Hi'
for i in numbers:
        web.open(url1+i+url2+' You are '+str(count)+' person')
        time.sleep(15)
        count+=1
        pg.press('enter')
        time.sleep(3)
        pg.hotkey('ctrl','w')
```
